

INTECH 3112: Web Applications Development II

1st SEMESTER A.Y. 2026–2027

SECOND TERM PROJECT

NAME: _____	SCORE: _____	DATE: _____
SECTION: _____	BUSINESS NAME: _____	ACTIVITY 4: ☐ COMPLETED

Project Objective: Develop a modular, responsive **Single Page Application (SPA)** Business Portfolio using React.js and Vite. The application must demonstrate Functional Components, Props, State, dynamic rendering, and organized visual sections based on the business concept developed in Part I.

Technical Development Checklist

1. Component-Based Architecture

- ☐ Create the project using React.js and Vite.
- ☐ Create a src/components/ directory.
- ☐ Use reusable Functional Components that return JSX.
- ☐ Create a Header/Navbar component.
- ☐ Create a Business Profile/Overview component.
- ☐ Create a Products/Services component.
- ☐ Create a Mission/Vision or Business Features component.
- ☐ Create a Contact Form component.
- ☐ Create a Footer component.

2. Props & Dynamic Data Flow

- ☐ Pass data from a parent component to a child component using Props.
- ☐ Store Products/Services in an array of objects.
- ☐ Display Products/Services using JavaScript .map().
- ☐ Use a unique key prop for every mapped item.
- ☐ Use Props to make components reusable.

3. State Management & Interactivity

- ☐ Use the useState() Hook.
- ☐ Implement at least ONE interactive feature.
- ☐ The state must produce a visible change in the user interface.

4. Information Organization & Visual Presentation

- ☐ Use the approved business information from Activity 4.
- ☐ Display the Company/Business Name.
- ☐ Display the Business Profile/Overview.
- ☐ Display the Mission and Vision.
- ☐ Display the Business Objectives.
- ☐ Display Products/Services.
- ☐ Display Business Features / Why Choose Us.
- ☐ Display Contact Information / Contact Form.
- ☐ Display a Footer.
- ☐ Style the portfolio using CSS or Tailwind CSS.
- ☐ Make the portfolio responsive for desktop and mobile.

Final Submission Checklist

- ☐ React.js/Vite project is complete.
- ☐ All required components are working.
- ☐ Props are working correctly.
- ☐ Array data is rendered using .map().
- ☐ useState() interaction is working.
- ☐ Responsive layout is working.
- ☐ Business content matches Activity 4.
- ☐ Project is ready for submission.

Submission Deadline: Friday, September 30, 2026 — No late submissions.

Presentation: No presentation is required. Simply record a video of the system demonstration with a voice-over.

Project Rubrics — Scoring

Category	Specification	Excellent	Good	Poor
Component Architecture & Structure	Reusable Functional Components in src/components/. Clear separation of portfolio sections.	30	20	10
Props & Dynamic Array Rendering	Props passed parent-to-child. Products/Services rendered from arrays using .map() with unique keys.	25	20	15
State Management	useState() correctly implemented with visible reactive interaction.	20	15	10
Information Organization & Layout	Business information logically grouped, visually clean, responsive, and styled with CSS/Tailwind.	15	10	10
Project Setup & Code Quality	Clean Vite structure, valid JSX, clean formatting, no browser console errors.	10	5	5

Maximum Score: 100
